Crouch / Stand
Dive / Roll (while running)
Jump Down (hanging mode)
Quick Stop / Stand on bottom

Underwater controls in blue
Use Right Thumb underwater for a quick turn

Pause / Map (tanker)

TIPS AND HINTS

- Hold up an enemy by aiming at them from behind when near (hold down X). Aiming at the soldier's face or groin can cause him to shake and beg for his life. If he is stubborn injure him.
- When facing a guard head on, you can easily choke them by punching them once and then hitting the grab button.
- Drag guards by holding down X while unarmed. Lift and drop the body several times to obtain items and ammunition.
- You can shoot a guards radio to permanently disable it.
- Throw a chaff grenade and guards cannot use their radios.
- Quickly unequipping and equipping will automatically reload your gun.
- Press down Y [lock on] button to shoot while moving.
- When holding down the weapon button (X) to fire (and the laser sight comes up), you can release the weapon—without firing—by slowly releasing the button.
- Doing one hundred pull-ups will increase the level of the grip gauge (it will max out at level three).
- Pressing Y underwater can cause the oxygen gauge to drop slower than normal.
- When bleeding, you can return yourself to a normal state by crouching and staying motionless.
- Equip cigarettes and the smoke produced by them will slowly reveal IR Beams.
- Remember the environments are interactive.
- FPV = First Person View
